

# SPATIAL LINKS BETWEEN TOURISM AND GASTRONOMY IN VIENNA

## Guest Overnight Stays by District & Dot Density of Restaurants, Cafés & Bars

This map illustrates how tourism intensity corresponds with gastronomic concentration in Vienna with a choropleth map showing guest overnight stays by district and a dot density layer representing the distribution of restaurants, cafés, and bars. The highest densities of both overnight stays and gastronomic establishments occur in *Innere Stadt* and the surrounding central districts, where tourism activity is most concentrated. In contrast, districts farther from the city center show significantly lower values in both datasets, highlighting a clear spatial gradient in Vienna's tourism-gastronomy relationship.

1 Dot = 5 Gastronomic Establishments
